TESLA Former™

The premium platform for body shaping and muscle strengthening

ADVANCED FUNCTONAL MAGNETIC STIMULATION

BEAUTYFORM MEDICAL

Exclusive Provider of IskraMedical

The medical platform that delivers comprehensive body shaping and muscle strengthening in a single integrated system

TESLA Former is a medical platform based on **advanced Functional Magnetic Stimulation (aFMS)** technology, engineered to activate deep neuromuscular structures and induce effortless muscle contractions that promote muscle hypertrophy, strength and improved functional performance, while supporting tissue regeneration. It provides a natural, non-invasive option to improve overall physical fitness or enhance the function of specific muscle groups.

With the **XXL applicator**, TESLA Former supports effective treatment even in patients with higher adipose thickness, by enabling deeper, more consistent stimulation of target musculature.

Patients not only notice enhanced contour and firmness, they also feel better physically, thanks to muscular stimulation that supports stability and overall well-being.

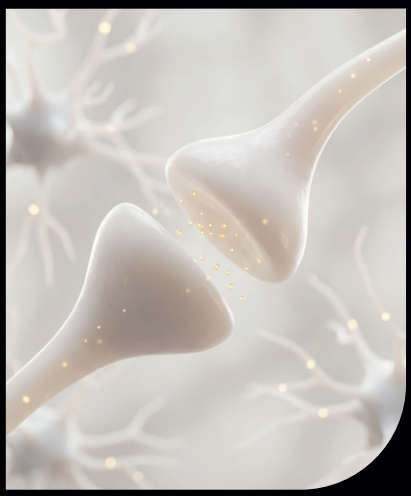

TESLA Former supports scalable clinical expansion, allowing the integration of additional applicators and treatments, such as **TESLA Face**, **TESLA Chair** and **TESLA Feet**, into a single, unified platform.

Developed in Europe by **Iskra Medical**, it combines advanced technology, clinical evidence and a comfortable treatment experience for both patients and practitioners.

Why choose Advanced Functional Magnetic Stimulation (aFMS)

It uses a high-intensity magnetic field to activate motor neurons, generating deep, repeated muscle contractions **without pain, heat or direct skin contact.**

This mechanism leads to meaningful clinical and aesthetic benefits:

Increased muscle tone and firmness, enhancing the definition of the treated area.

Homogeneous remodeling thanks to multiple and consistent stimulation.

Progressive and predictable results that integrate seamlessly into existing aesthetic protocols.

Reduction of subcutaneous fat through metabolic activation, with simultaneous dual-area treatment.

Comfortable, non-invasive treatments suitable for a wide range of patients, even with higher adiposity where deeper stimulation is key.

No pre-treatment preparation or post-treatment downtime.

aFMS is a safe, efficient and clinically validated technology, ideal for centers seeking to enhance body-remodeling outcomes with a non-invasive, medically oriented approach.

Muscle represents

30-40%

of total body mass[1]

Making it one of the body's largest and most active tissues, **and a key driver of performance, strength, and body definition.**

(Janssen et al., Journal of Applied Physiology, 2000)

*Model is not actual patient.

Redefined contour, reduced adiposity

aFMS induces intense muscle contractions that **increase local energy demand.** When this stimulus is sustained, metabolism shifts from using glucose to mobilizing and **consuming fatty acids**, contributing to the gradual reduction of subcutaneous fat.

This process mirrors the physiology of intense exercise, **enhancing oxygenation, circulation and lymphatic drainage**. The result is adipose reduction **through metabolic pathways**, without heat, tissue damage or physical effort. [1]

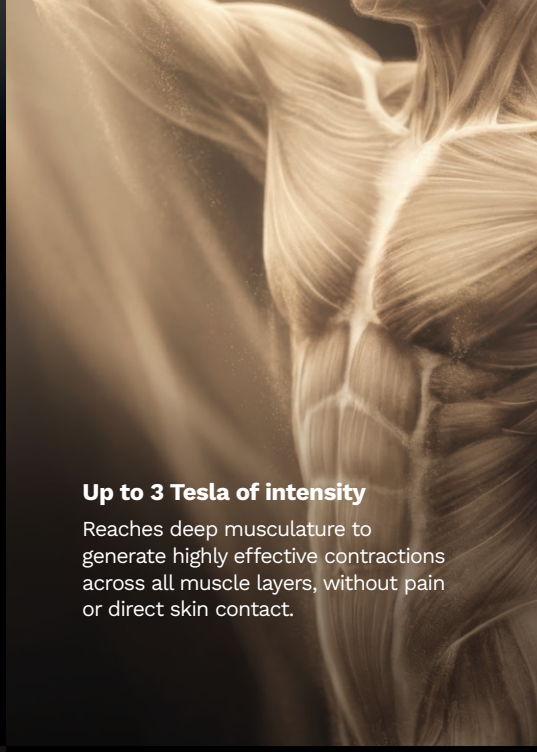

In patients with higher adipose thickness, deeper stimulation helps maintain effective neuromuscular engagement to support more consistent remodeling outcomes.

[1] Wong et al., 2020 (Journal of the Laser and Health Academy).

Empower your clinic with a platform designed to support your growth

TESLA Former is a flexible, high-performance medical platform created to evolve alongside your clinic. Its power, depth of action and ability to integrate multiple treatments make it a unique solution within aesthetic and functional medicine.

Why TESLA Former stands out:

Up to 3 Tesla of intensity

Reaches deep musculature to generate highly effective contractions across all muscle layers, without pain or direct skin contact.

THE XXL applicator

It delivers deeper stimulation than any other applicator on the market, enabling effective activation of deep gluteal and abdominal muscles even when these are located beneath substantial adipose layers.

Safe, non-invasive system manufactured in Europe

No heat, no tissue damage, no consumables, and designed under certified clinical standards by Iskra Medical.

Preset programs tailored to each treatment area

Simply select the area on the device interface, and the system automatically applies the optimal stimulation parameters.

Four independent channels

Treat multiple areas in the same session or combine applicators, improving efficiency and increasing clinic profitability.

Versatile applicators

Designed to adapt to each patient across the abdomen, glutes, thighs, arms and small areas, ensuring precision and ergonomic application. Depending on the treatment area, M, XL or XXL applicators may be used.

Scalable platform

Start with body treatments and later integrate TESLA Face, TESLA Chair or TESLA Feet into the existing platform. One investment that opens new business lines according to your clinic's demand.

TESLA Face +

TESLA Chair +

TESLA Feet +

TESLA Face

The new standard for midface lift and **regenerative facial rejuvenation**

TESLA Face is a dedicated facial applicator designed to deliver a dual-action approach within a single session, combining neuromuscular lift support with regenerative stimulation to **enhance skin quality, radiance and a fresher look, while preserving the patient's natural expression.**

Lift + Regenerate

A DUAL-ACTION FACIAL APPROACH

Lift
NEUROMUSCULAR ACTIVATION

Supports a natural midface lift through direct magnetic neuromuscular activation in the treatment area. By selectively activating key elevator muscles (zygomaticus major, zygomaticus minor, buccinator, masseter and risorius) it encourages elevator dominance that supports a visibly lifted mid-cheek and improved commissure orientation, enhancing facial tone and definition.

Regenerate
REGENERATIVE MAGNETIC STIMULATION (RMS)

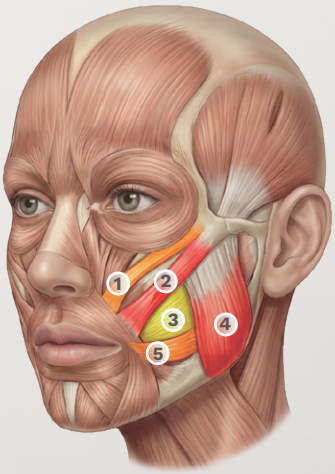

Delivers magnetic fields shown to enhance dermal fibroblast activity, stimulating collagen production and supporting extracellular matrix renewal and improved dermal structure. This regenerative effect supports natural tissue repositioning and cellular regeneration, helping deliver a healthy post-treatment glow, improved skin radiance and overall skin quality.

Why integrate TESLA Face into your clinic:

- Positions your clinic at the forefront of regenerative aesthetics and natural-looking outcomes.
- Comfortable, pain-free and non-invasive sessions with excellent patient acceptance.
- A refreshed look with visible improvement, without compromising natural expression.
- No consumables, high profitability per session.
- Protocol-friendly: integrates seamlessly with RF, laser, PRP and biostimulation.
- Scientific evidence supporting the biological mechanisms of Functional Magnetic Stimulation, including its regenerative applications.

Lift

Neuromuscular Activation

1- Zygomaticus Minor
2- Zygomaticus Major
3- Buccinator
4- Masseter
5- Risorius

TESLA Chair

93%

of patients reported a **reduction in urinary leakage** after completing a full treatment cycle.

(Lukanovic et al., 2019)

TESLA Feet

The only Foot Applicator on the market specifically designed for Functional Magnetic Stimulation. Provides targeted, clinically effective therapy for the plantar region, ideal for modern rehabilitation needs.

The new era of non-invasive pelvic rehabilitation

TESLA Chair represents a significant advancement in pelvic-health treatment. Its dual-applicator magnetic stimulation, delivered in an ergonomic seated position, activates the pelvic musculature and lower-back muscles without direct contact or pain, providing a comfortable experience for patients.

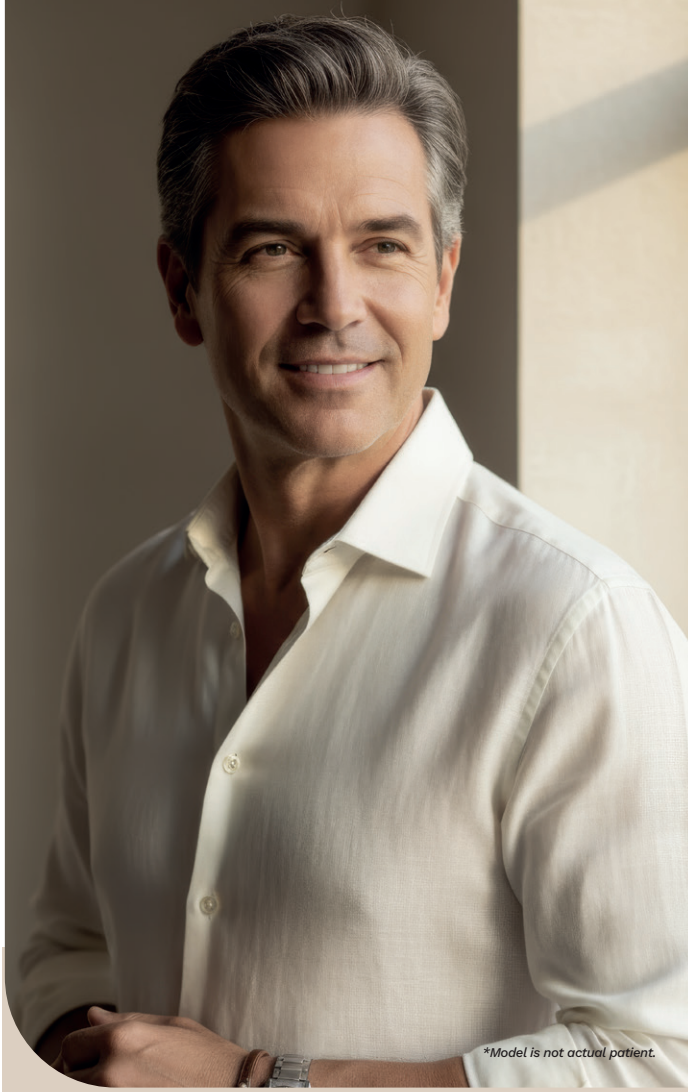

The CORE 360° treatment, developed by Iskra Medical, provides a more comprehensive and effective pelvic-health approach. It combines **simultaneous stimulation** of the pelvic floor, the lumbosacral region and the deep abdomen, delivering precise and uniform activation to optimize pelvic function and control.

91,7%

of patients would recommend FMS to others, reflecting high satisfaction and perceived effectiveness.

(Serdenšek et al., 2018)

Pelvic floor pathologies that can be treated with TESLA Chair:

- Stress, urge and mixed urinary incontinence
- Fecal incontinence
- Pelvic floor muscle weakness
- Chronic pelvic pain
- Pudendal nerve dysfunction
- Postpartum dysfunctions
- Erectile dysfunctions
- Lumbopelvic stability and neuromuscular control issues

Why is TESLA Former the strategic investment your clinic needs?

With TESLA Former, you gain not only strong clinical outcomes, you also improve operational efficiency, expand service lines and adopt a more profitable business model.

Clinical benefits

NATURAL RESULTS

Regenerative stimulation that enhances firmness, definition and skin quality while preserving natural expression.

A GROWING DEMAND FOR LONGEVITY-FOCUSED CARE:

Centered on muscle health, tissue regeneration and functional performance.

PRE- AND POSTOPERATIVE SUPPORT:

Helps prepare tissues before surgery and supports functional recovery afterwards.

EFFECTIVE BODY REMODELING

Progressive contour improvement through muscle activation and metabolic fat reduction, enabled by deeper stimulation to maintain effective muscle engagement even in higher-adiposity cases.

ENHANCES OTHER TREATMENTS:

Optimizes the performance of invasive and non-invasive procedures when incorporated into combined protocols, with a safe, easy-to-use workflow.

COMFORTABLE, NON-INVASIVE SESSIONS:

Excellent patient acceptance and strong adherence.

Business benefits

- **SCALABLE PLATFORM:** add TESLA Face and TESLA Chair without replacing the device.
- **NO CONSUMABLES:** better return per session and predictable operational costs.
- **HIGHER ROTATION:** short, comfortable sessions that optimize scheduling.
- **HANDS-FREE OPERATION:** minimal supervision required, freeing professional time.
- **SERVICE EXPANSION:** body shaping, facial rejuvenation and pelvic health within one system.
- **EUROPEAN MANUFACTURING:** certified medical quality and reliability.

When results matter, evidence does too

Functional Magnetic Stimulation with TESLA Former has demonstrated consistent improvements in **body remodeling** and **muscle activation** through **ultrasound and MRI imaging:**

15% to 20%

increase in muscle thickness after a 10-session treatment cycle.[1]

18% to 22%

reduction in subcutaneous fat, associated with metabolic activation.[1]

2cm to 3cm

decrease in abdominal circumference after 10 sessions.[1]

These results confirm TESLA Former as a safe, effective and non-invasive medical option for body remodeling and muscle strengthening.
